

### **Programme Specification**

1	Awarding Institution/Body	Leeds City College	
2	Delivery Location(s)	University Centre	
3	Programme Externally Accredited by (e.g. PSRB)		
4	Award Title(s)	FD Game Art	
5	FHEQ Level [see guidance]	5	
6	Bologna Cycle [see guidance]	Short cycle	
7	HECoS Code and Description	This relates to the subject groupi advice can be sought from HEDO	ngs that are used to code provision and
8	Mode of Attendance [full-time or part-time]	Full-Time	
9	Relevant QAA Subject Benchmarking Group(s)	Computing 2019 and Art and des Foundation Degree September 2	-
10	Relevant Additional External Reference Points (e.g. National Occupational Standards, PSRB Standards)		
11	Date of Approval/ Revision	2019	
12	Criteria for Admission to the Prothe others)	ogramme (select the appropriate Ent	ry Criteria for the award and remove
		Typical offer	Minimum Offer
	A Levels:	2xD grades	1xE grade

BTEC L3 Diploma or Extended Diploma:	MP, MPP grade	PP, PPP grade or a Subsidiary Diploma with an E grade
Access to HE Diploma:	Overall pass with 60 credits, with 24 credits to be at a Merit grade	Overall pass with 60 credits
IELTS:	IELTS 6.0 with no less than 5.5 in any	component.
International qualifications:	International qualifications will be ass	sessed against these criteria
Mature applicants:	not have met the academic criteria, b experience in their chosen field. Cand	idates in this category and otherwise are r suitability for the course and may be ce to support their application.
RPL claims:	The course structure actively supports Learning (RPCL) or Recognition of Price	s claims for Recognition of Prior Certified or Experiential Learning (RPEL)
specialist modules, w	amme are to: sive and challenging vocational program hich facilitate access and progression for

14	Learn	ing Outcomes
	-	rogramme will enable students to develop the knowledge and skills listed below. On ssful completion of the programme, the student will be able to:
		ledge and Understanding
	К1	Critically evaluate the relevant theories, concepts and principles applicable to game art.
	К2	Understand the role of the practitioner in the specialism of game art.
	К3	Analyse appropriate research methodologies to underpin critical thinking.
	К4	Understand legal and ethical issues surrounding art within games.
	Cogni	tive/Intellectual Skills
	C1	Apply problem solving and solution-based methodologies to the discipline of game art.
	C2	Evaluate and design, game art using appropriate theories and techniques relevant to the discipline.
	С3	Apply appropriate practices and tools for the design and implementation of game-based features.
	C4	Employ balanced and logical arguments to critically explore game art and its practice.
	Prac	tical/Professional Skills
	P1	Able to act with increasing autonomy with reduced need for supervision.
	P2	Apply a range of creative and practical skills in the creation of artwork and assets for use within a game.
	Р3	Analyse and employ software tools relevant to context.
	P4	Build creative and game ready artwork.
	Key	Fransferable Skills
	T1	Work effectively as individuals and in groups.
	Т2	Use a range of specialist software appropriate to the discipline.
	Т3	Increasingly utilise a range of academic skills to report and communicate findings effectively.
	T4	Develop practical and professional skills that match career aspirations.
15	Key	Learning & Teaching Strategy and Methods
	desig oppo	earning and teaching strategy and methods employed throughout the course are gned to support students in meeting the learning outcomes by offering a range of ortunities, including individual and group practical and research projects, written and forms of presentation and the creation of game art.

Game Art engages with a wide range of teaching methods: practical workshops, lectures, seminars, large and small group discussion and presentations, it is, therefore, inclusive for a variety of learning styles.

Teaching and Learning strategies will include lectures, one to one and group discussions. Individual consultations will underpin each module where such things as guidance on writing and presenting an effective brief and project proposals will be covered, as well as practical support.

The programme will provide support to allow students to work autonomously, with structured guidance from lecturers, project or task milestones will be agreed to track progress to support the transition to working more autonomously, especially at Level 4.

Guidance on working towards recognised industry practice will be provided through real world case studies. The simulation of industry practice will be embedded in the programme to develop independent working processes and approaches through the development of viable game ideas.

Lectures and discussion on critical and analytical thinking will be delivered as part of appropriate modules. Guidance on research procedures and methodologies will be embedded alongside academic skills development ensure students written work is up to acceptable academic stands expected on the level of study.

One to one tutorials will be used to provide guidance and practical support to produce working game levels to professional standards and encourages the realisation of a range of practical skills in game development. Individual and small group consultations will be utilised to develop wider contextual understanding of how small teams of developers produce computer games in a range of contexts, through devising and developing practical game projects.

A range of formative and summative assessment strategies that will include, questioning, open ended questions, brainstorming, presentations, production diaries, work logs, observations, self-assessment, group discussion, peer assessment, questionnaires, reflective practice.

#### e-learning strategy

The programme will incorporate the use of Google Classroom where module resources will be uploaded. Students will be able to access all materials on of off-site, this will enable students to better fit their learning around their lifestyles and manage other commitments.

Using google classroom will allow staff to employ a range of tools to enhance the learning experience and will include online discussions, tutorial videos, links to module specific online video and podcasts

All assignments will be set in google classroom and students will upload their final submissions to google classroom.

Staff can engage with students outside of class using google Classroom ensure a broader range of support for students. This will also include a learning community via a Facebook group where students can engage with one another to help, support and share resources.

#### Work Related Learning and Personal Development

There are no requirements for a formalised work placement, but the programme has a focus on preparing students for work in the games industry. This is done mainly through the simulation of industry working practices. Students are encouraged to work collaboratively in small development teams that are reflective of the makeup of real-world indie development teams.

Game Jams are also a focus on the course and students will take part in several game jams at L4 and L5 of the programme. Game Jams are a common feature in many games companies to encourage staff to quickly develop and prototype new game ideas and concepts. There are a number of external Game Jams students will take part in, the global Game Jam for example of a weekend long global competition where students will work towards developing a rapidly developed prototype based on a given theme.

The programme endeavours to develop students with an enthusiasm for enquiry into their discipline and the motivation to sustain it. Currently this happens in many guises, the game Jam is key to student buy in, as is the development of a studio atmosphere. Students are encouraged to use out of class time to socially interact through playing games within the University Centre to maintain enthusiasm for the subject. Culture Club Society, and the promotion of interdisciplinary practice help to support the student's integration into the wider creative context and to broaden skills and interests.

Employability is embedded into the programme and this will be underpinned with the development of an online portfolio and also through a scheme of visiting lecturers and industry practitioners who will provide insight and also portfolio advice, guidance and critique where appropriate.

In addition, students will be given the opportunity to develop a broad range of employability skills, often pitched as "soft Skills". These will include the ability to think creatively, work individually or as part of a team, plan and prepare budgets, chair and contribute to meeting, positive work ethic with good punctuality, excellent written and verbal communication skills.

16	<b>Key Assessment Strategy and Methods</b> A broad range of skills and knowledge are needed in the Game Development industry and assessments are tailored to the particular task being undertaken. Assessed tasks include the development of computer games and game assets, the application of theory to practical problems, team work, project work and the communication of ideas and concepts through reports and presentations. The assessment of these tasks are guided by programme and module learning outcomes. Modules are assessed by a combination of practical work, written essays, presentations, project logs.
	Each module will have two assessment components. Learning outcomes will be assessed twice giving ample opportunity for students to meet the specified learning outcomes of each task and will also ensure that students are not over assessed.
	Assignments tasks will be managed across the academic year ensuring there is sufficient time between assessments to support the completion of the programme.
	The course promotes independent learning through the promotion of CPD when learning new software and when researching and applying new theories and concepts. Students are encouraged to adopt an analytical approach to their engagement with computer games, transitioning from player to developer by applying a critical eye to key game texts and independently applying new found approaches to their own game development concepts. Greater autonomy is expected as students move from L4 to L5 of the programme and this is supported through the exploration, experimentation, development and application of key game theories in their coursework.
	Formative assessments usually carry no weighting but are critical for the students' development and can be useful preparation for the related summative assessment. Formative assessment can take the form of a group or individual critique, and informal peer assessment through peer group discussions.
	Formative assessment is a part of the individual tutorial system, featured in every module, and feedback is given verbally or in written format depending on the module. Each assessment is aligned with its intended learning outcomes and learning activities, so it is clear what is being assessed.
	Formative assessment is a key feature of the first year and is featured early in the induction period of the first year to familiarise students with the formative feedback strategy.
	Summative assessment will be given in written format using standard programme feedback forms. The feedback will discuss the final grade decision and how it was reached and also offer feedforward style feedback that will identify areas for improvement and suggest approaches that can be adopted in future assessments. This will help students to identify areas for improvement, and of current strengths which are to be developed.
	All feedback will be presented in line with the institutions policy ensuring timely feedback is given to students for each assessment.
	Employability is built into the programme in core modules. Future employment are entrenched within the programme and practical modules are very much focused on the

development of professional portfolio pieces that can support progression in to
employment

Semester 1	WRL Project 2			Academic Art for Emerging Technologies 20 Credits mployability Skills

	The course offers a full-time and a part-time option, students studying on the foundation degree full time will attend University for 2.5 days per week full-time and 1 day per week part-time. Students, alongside core modules will have a tutorial which will have a study support theme to support students not only pastorally but also academically and technically through their modules.
	At both level 4 and level 5 Project runs through the entire year to ensure that students can utilise skills gained throughout all the modules into a team project. The Project module is a collaborative module that runs through Game Art, Game Development and Game Programming.
	At Level 4 the focus is on getting the students to learn the basics of creating art for games. Introducing Visual Design early so students get used to the artistic requirements and gain the appreciation of art in a technical manner. Introducing 3D workflows throughout the entire year whilst later bringing in Digital Sculpting to add another layer to their 3D art workflows. This is underpinned with understanding and learning what makes a game work in relation to mechanics and play psychology, so the artists understand what they are making art for and this can help aid their creative decisions and designs.
	At Level 5 Character Art and Advanced 3D run throughout the entire year, this is to allow for maximum development time outside of the classroom. Allowing skills to settle in more naturally and more room for experimentation in regard to design choices. Whilst the students are learning and developing these skills, they will also explore how to develop artwork for new technologies learning what they have learnt from Introduction to 3D and Advanced 3D. At the end of level 5 they will prepare themselves for industry and the interviews that may follow giving them a rounded understanding of art creation, game theory and work-related skills.
18	
19	Support for Students and Their Learning
	The award adopts the following approach to student learning support.
	<ul> <li>A robust and open communications are encouraged to give students access to lecturers and management when needed; this includes e-mail, the VLE and notice boards and open office policy.</li> <li>All necessary information about the programme is provided by means of the</li> </ul>
	<ul> <li>student handbook, module handbooks and the VLE.</li> <li>Each student is allocated a personal tutor for regular tutorials and personal development planning. This is implemented in the first term and continued throughout the year of study.</li> </ul>
	<ul> <li>Research Skills and academic writing support from the departments coaching tutor</li> <li>Formative assessment submissions are outlined in module handbook and formative feedback given for each module component.</li> </ul>
	<ul> <li>Practical work is supported by regular peer feedback at key points in the module</li> <li>Shared documents and folders between staff and students to support live editing and feedback on work.</li> </ul>
	<ul> <li>There is an extensive range of learning resources in the Library, supported by specialist staff that provide bespoke study skills sessions for students.</li> </ul>
	<ul> <li>The University centre provides an extensive range of services for students, including support for those with additional learning support, welfare, counselling, financial support such as bursary and student finance application support.</li> <li>Employability embedded throughout the programme</li> </ul>

	<ul> <li>The department has a coaching tutor who will support students with a range of support that will include, academic, time management, regular one to one tutorials, tracking submission and tracking and chasing attendance as and when needed.</li> </ul>
20	Distinctive Features
	Students will be given the opportunity to work across a wide range of projects, developing skills in the specialism of Game Art. Developing the workflows required to create game ready assets, they will create environments, props and sculpt realistic looking game characters. They will develop skills in implementing these assets into a game engine, preparing them to showcase their skills in a professional portfolio.
	Students will be developed as a creative individual, learning to appreciate and apply the artistic, technical and narrative techniques that form the core of contemporary games development. They will become well versed in the real world of computer games, learning how the past, present and future of computer games are vital to career and personal development. They will develop a range of skills that can be used across the creative industries, such as Storyboard artist, Computer animation, 3D visualisations, visual effect artist and many others.
	The focus of the programme is preparing students for a career in the games industry either as a self-employed practitioner or as an employee of an SME or AAA company. There is an overall emphasis on group working that reflects industry practice in game development. Work related progression is the focus of two modules with the aim of developing a professional identity and portfolio of game design and development assets.
	Within Game Art, the students have the opportunity to work with multiple disciplines to create and realise their game ideas. As the Games Artist they will work alongside Programmers and Developers to develop and work on as a team a group game. With games being such a diverse and collaborative environment the room to introduce sound designers, voice actors, concepts artists is available for students to outsource and work on their games.
	Through the use of Game Jams and Group working the course itself will recreate industry practice to ensure that students get a good feeling of team work and game development before they enter the industry.
	Enterprise is at the centre of one module to instil an ethos of wider understanding of the nature of starting and running a small games development studio.
	The institution currently offers games related studies from Level 1 to level 6, this supports students who develop better in a familiar environment with staff they know to achieve their full potential in a supportive environment.
	The University has a proactive college business engagement team to provide students with career opportunities. In addition a focus of the programme is the development of a portfolio of game assets and playable game levels that will form the foundation of a varied portfolio and are a valuable resource to demonstrate practical experience to employers.

and the provision of real throughout the program	th links to the games industry that brings opportunity to students experience of working within the industry is embedded me through simulation of practice and a series of guest lectures. ng relationships with local games groups including Yorkshire and Game Republic
